

Business Exposure Assessment & Threat Intelligence Services

Service Brochure

Leading Digital Trust

www.nucleus-systems.com | Centurion, Gauteng, South Africa

200+ Clients, 1000+ Engagements

Clients served and engagements completed globally through strategic partners.

DarkOwl-Powered Dark Web Intelligence

Real-time access to the world's largest commercially available dark web dataset - over 9.5 billion records

24/7 Continuous Monitoring Available

Annual program delivers always-on exposure monitoring with automated alerts and notifications.

"Your organization's digital footprint is visible to adversaries long before it is visible to you."

Dark web exposure assessment brings the hidden threat landscape into view, identifying stolen credentials, brand impersonation, leaked data, and active threat-actor discussions targeting your organization before they lead to a breach, a regulatory incident, or a reputational crisis.

About Nucleus Systems

Nucleus Systems (Pty) Ltd is a secure digital services company specializing in cybersecurity, compliance, and digital trust assurance. Founded during the Fourth Industrial Revolution, we leverage modern technologies from inception, delivering cutting-edge security without legacy constraints.

Over the past 11 years, we have served 200+ organizations through 1,000+ engagements globally across banking, fintech, digital public infrastructure, government, healthcare, and critical services. Our diverse team spans Africa, the UK, the US, India, Australia, and the UAE, bringing over 60 years of combined industry experience.

Our Core Values

Outside-In Perspective	Low-Touch Engagement	Open Standards	Knowledge Transfer
Align cybersecurity with market and customer needs	Expert skills that help clients help themselves	Contributing to the global cybersecurity body of knowledge	Empowering your team for long-term independence

Why Business Exposure Assessment & Threat Intelligence?

Most organizations focus on securing what they can see: their own systems, networks, and applications. But adversaries do not restrict themselves to your perimeter. They operate in the dark web, in criminal forums, in ransomware data dumps, and in underground markets, collecting, trading, and exploiting information about your organization that you may not even know exists.

Business Exposure Assessment & Threat Intelligence changes that equation. Powered by DarkOwl's industry-leading dark web intelligence platform, the world's largest commercially available dark web dataset with over 9.5 billion indexed records, Nucleus Systems gives organizations the ability to see their own exposure the way adversaries do: from the outside, across the full breadth of the dark web, deep web, and criminal underground.

Business Driver	Why It Matters
Credential & Data Leak Detection	Identify stolen employee credentials, customer data, and internal documents circulating in dark web markets and forums before they are weaponized in an attack.
Brand & Impersonation Risk	Detect fake domains, phishing kits, and brand impersonation campaigns targeting your customers and employees in real time.
Ransomware & Extortion Monitoring	Monitor ransomware group activity, data leak sites, and extortion threats that mention or target your organization.
Third-Party & Supply Chain Risk	Assess the dark web exposure of your key suppliers, partners, and technology vendors to identify downstream risk.
Regulatory & Compliance Evidence	Demonstrate proactive threat intelligence capability to auditors, regulators, and insurers — meeting obligations under POPIA, GDPR, and cyber insurance frameworks.
Executive & VIP Protection	Monitor for personal data, contact details, and discussions about threat actors targeting C-suite executives, board members, and key personnel.

Benefits and Value of Threat Intelligence

Business Exposure Assessment & Threat Intelligence delivers measurable security and operational value by revealing what adversaries already know about your organization before that knowledge is exploited. Beyond technical findings, it provides strategic insights that inform risk decisions, protect the organization's reputation, and strengthen its overall security posture.

Business Driver	Value Delivered
Proactive Exposure Reduction	Identify and act on leaked credentials, sensitive data, and threat-actor discussions before they lead to a breach or extortion attempt.
Improved Threat Visibility	Gain continuous, evidence-based insight into your organization's dark web footprint, covering credentials, domains, IP ranges, brand mentions, and VIP data.
Compliance Assurance	Meet regulatory and cyber insurance requirements with documented, repeatable threat intelligence assessments and monitoring evidence.
Informed Decision-Making	Prioritize security investments and incident response based on real, active threat intelligence, not hypothetical risk models.
Brand & Reputation Protection	Detect phishing campaigns, fake domains, and impersonation attacks targeting your customers and employees before they cause damage.
Continuous Improvement	Enable ongoing enhancement of security controls and incident response playbooks through regular exposure intelligence updates.

Nucleus Systems delivers threat intelligence that goes beyond automated scanning, providing real-world evidence of dark web exposure that transforms how organizations understand and respond to their external risk.

Service 1: Once-Off Business Exposure Assessment

A comprehensive, point-in-time dark web and open-source intelligence assessment of your organization's digital exposure. Powered by DarkOwl's DARKINT™ intelligence platform and API suite, this engagement provides an authoritative, evidence-based view of what adversaries can see, access, and exploit relating to your organization across the dark web, criminal forums, data breach repositories, and threat actor channels.

Core Service Components

- Dark web credential scanning — leaked employee and customer credentials across breach databases and criminal markets
- Domain and subdomain exposure monitoring — phishing kits, typosquatting domains, and impersonation infrastructure
- Sensitive data and document leak detection — internal documents, financial data, PII, and proprietary content
- Ransomware and extortion site monitoring — active and historical mentions on ransomware group data leak sites
- IP and infrastructure exposure — dark web references to your public IP ranges, servers, and network assets
- Executive and VIP data exposure — personal information, contact details, and threat actor targeting of key personnel
- Brand mention and threat actor discussion analysis — forums, marketplaces, and Telegram channels
- Third-party and supply chain exposure — dark web footprint of key suppliers and technology partners
- DARKINT™ Risk Score — a quantified, benchmarked exposure risk score for your organization

Assessment Methodology — What We Scan

Intelligence Category	Data Sources & Method	DarkOwl API
Credential & Account Exposure	Query breach databases, combo lists, stealer log repositories, and dark web markets for employee email domains, usernames, and hashed/plain credentials	Email API, Credential API
Domain & Phishing Intelligence	Scan for typosquatting domains, lookalike domains, phishing kit deployments, and malicious redirect chains targeting your brand.	Domain Monitoring, Phishing API
Sensitive Data & Document Leaks	Identify internal documents, financial records, customer PII, source code, and configuration files exposed on paste sites, forums, and dark web file shares.	Entity API, DARKINT™ Search
Ransomware & Extortion Monitoring	Monitor all major ransomware-group data-leak sites, negotiation channels, and dark-web forums for mentions, threats, and published data related to your organization.	Ransomware API, Vision UI
IP & Network Infrastructure Exposure	Search dark web sources for references to your public IP ranges, hosting providers, server configurations, and network topology.	IP API, DARKINT™ Score
Executive & VIP Exposure	Query dark web sources for personal data, home addresses, phone numbers, travel details, and threat actor discussions targeting named executives and board members	Entity API, PII Scanning
Vulnerability & Exploit References	Monitor exploit forums and dark web channels for references to vulnerabilities in technologies your organization uses, including zero-days and proof-of-concept code.	VulnDB API
Threat Actor Intelligence	Search criminal forums, Telegram channels, and dark web marketplaces for discussions, plans, and posts that reference your organization, industry, or supply chain.	DARKINT™ Search, Vision UI

Tools & Platform

DarkOwl DARKINT™ Platform (Vision UI), DarkOwl Entity API, Credential API, Domain Monitoring API, Phishing API, Ransomware API, IP API, and VulnDB API, integrated and orchestrated by Nucleus Systems practitioners with proprietary enrichment and validation workflows.

Technical Requirements from Client

Item Required	Details
Organization Domain Names	All primary and subsidiary domain names (e.g., company.com, subsidiary.co.za)
Key Website URLs	Primary website URLs and any known customer-facing portals
Public IP Ranges	Known external IP ranges and CIDR blocks associated with your organization
Executive / VIP Names	Names and work email addresses of C-suite, board members, and key personnel to monitor
Brand & Product Keywords	Organization name, product names, and trading names to use as search terms
Third-Party Suppliers (Optional)	Domain names of key suppliers and technology partners for supply chain exposure assessment
Industry & Sector	Sector classification to enable threat actor targeting analysis relevant to your industry
Authorisation Confirmation	Signed confirmation that the named individual is authorized to commission this assessment

Service 2: Annual Continuous Threat Intelligence Monitoring

A 12-month continuous monitoring program that delivers always-on dark web and threat intelligence coverage for your organization. Powered by DarkOwl's real-time intelligence platform, this service provides 24/7 access to a dedicated monitoring dashboard, automated alerts for new exposure events, and quarterly practitioner-led review sessions to contextualize findings and update monitoring parameters.

Unlike a point-in-time assessment, continuous monitoring tracks your organization's dark web exposure as it evolves — detecting new credential leaks the day they appear, identifying emerging phishing campaigns before they reach your customers, and surfacing ransomware group discussions before they result in an attack.

Core Service Components

- 24/7 access to DarkOwl-powered monitoring dashboard — configured for your organization's specific targets
- Automated real-time alerting on new credential leaks, brand mentions, and threat actor activity
- Continuous domain and phishing infrastructure monitoring with daily new-domain detection
- Ongoing ransomware group and data leak site monitoring with immediate notification on new posts
- Monthly executive exposure digest — summarising new findings relevant to VIPs and key personnel
- Quarterly practitioner-led review sessions — contextualizing findings, updating monitoring scope, and advising on response
- Annual comprehensive exposure report — year-in-review of exposure events, trends, and risk trajectory
- On-demand investigation support — up to 4 hours per quarter of practitioner-led deep-dive investigation
- Monitoring scope updates at no additional cost — add new domains, IPs, executives, and keywords as your organization evolves

Continuous Monitoring Scope — What We Watch

Monitoring Category	Frequency	Alert Trigger
Credential & Account Leaks	Real-time / Continuous	New email/password combinations matching your domain(s) appear in any monitored source.
Domain & Phishing Infrastructure	Daily	New lookalike domain registered, phishing kit deployed, or malicious redirect detected
Ransomware & Data Leak Sites	Real-time / Continuous	Your organization's name or domain is mentioned or published on any ransomware group site.
Dark Web Forum Mentions	Real-time / Continuous	Organization name, brand, IP range, or executive name appears in monitored forum posts.
Sensitive Data & Document Leaks	Continuous	New documents, credentials, or datasets that match your target keywords are posted to monitored sources.
Executive & VIP Exposure	Continuous	New personal data or targeting activity related to named VIPs detected in any monitored channel
Vulnerability & Exploit References	Daily	New exploit, proof of concept, or vulnerability discussion referencing your technology stack.
Supply Chain Exposure	Weekly	Significant new exposure events detected for configured third-party supplier domains

Dashboard & Alerting Configuration

Upon program commencement, Nucleus Systems configures the monitoring dashboard to include all client-supplied target parameters. Clients receive access credentials and an onboarding session covering dashboard navigation, alert configuration, notification thresholds, and investigation workflows. Monitoring parameters can be updated at any time via the Nucleus Systems engagement portal.

Scoping Guidelines — Assessment & Monitoring Targets

Use the framework below to classify your organization's digital footprint and determine the appropriate scope of assessment. The volume of monitored targets affects the depth of coverage and the number of automated alerts generated.

Scope Factor	Standard	Extended	Enterprise
Primary Domains	1–3 domains	4–8 domains	9+ domains / multi-brand
Public IP Ranges	1 CIDR block (< 50 IPs)	2–4 CIDR blocks	5+ blocks / cloud + on-prem
Executive / VIP Profiles	Up to 5 named individuals	6–15 named individuals	16+ / board + senior leadership
Brand & Product Keywords	Up to 10 search terms	11–25 search terms	26+ terms / multi-brand / multilingual
Third-Party Suppliers	Not included	Up to 5 supplier domains	Up to 20 supplier domains
Subsidiary / Affiliate Coverage	Not included	Up to 3 subsidiaries	Unlimited subsidiaries
Industries / Sectors Monitored	1 sector	2–3 sectors	Full threat landscape
Typical Assessment Duration	7–10 business days	10–14 business days	14–21 business days

Deliverables — Every Engagement Includes

Deliverable	Description	Audience
Executive Exposure Summary	Business-language overview of the organization's dark web risk posture, including DARKINT™ Risk Score, top exposure categories, and strategic remediation priorities	C-Suite / Board
Technical Findings Report	Full dark web intelligence findings with source attribution, evidence screenshots, data categories, severity ratings, and recommended remediation actions for each finding	Security / IT Teams
Credential Exposure Register	Structured register of all identified leaked credentials, email addresses, usernames, breach source, date of exposure, and recommended response actions.	IT / IAM Teams
Domain & Phishing Intelligence Report	Inventory of detected lookalike domains, phishing kits, and brand impersonation infrastructure with takedown recommendations	Security / Legal
Executive Exposure Report	Confidential per-person exposure summary for each monitored VIP personal data found, threat actor targeting activity, and recommended protective actions.	CEO / Board / HR
DARKINT™ Risk Score Report	Quantified, benchmarked exposure risk score for your organization relative to industry peers, supporting board reporting and insurance submissions	C-Suite / GRC
Remediation Roadmap	Prioritized action plan: immediate credential resets first, followed by domain takedowns, infrastructure hardening, and longer-term monitoring enhancements	Security / IT / Legal
Presentation & Debrief	Interactive walkthrough session with technical and leadership stakeholders covering all findings, remediation priorities, and next steps	All Stakeholders
Optional Retesting at 50% of package costing	Post-remediation follow-up scan to confirm that identified exposures have been addressed and no new material exposure has emerged	Technical / Compliance

Delivery Methodology, Timeline & Plan

Once-Off Business Exposure Assessment | Annual Continuous Threat Intelligence Monitoring

SERVICE 1

Once-Off Business Exposure Assessment

Typical Duration: 7–14 Business Days

Phase	Days	Key Activities	Output / Deliverable
1	Day 0	- Engagement agreement and authorization confirmation signed - Target information collection: domains, URLs, IP ranges, executive names, brand keywords, and supplier domains submitted - Nucleus Systems configures DarkOwl scanning parameters - Kick-off briefing with client security contact	Signed SOW, Target Profile
2	Days 1–3	- DarkOwl DARKINT™ API queries executed across credential databases, breach repositories, and combo lists - Domain and phishing infrastructure scan initiated - Ransomware group data leak site monitoring commenced - Dark web forum and Telegram channel keyword search executed	Raw Intelligence Dataset
3	Days 3–7	- IP range and network infrastructure dark web reference scanning - Executive and VIP personal data exposure queries - Sensitive document and data leak source identification - Vulnerability and exploit reference scanning against technology stack keywords - Third-party supplier domain exposure assessment (if in scope)	Full Exposure Inventory
4	Days 7–10	- Practitioner-led validation and false-positive filtering of all findings - Severity rating and business impact assessment for each exposure category - DARKINT™ Risk Score calculation and peer benchmarking - Evidence compilation — screenshots, source attribution, data samples	Validated Findings Register
5	Days 10–12	- Technical findings report drafting — all exposure categories with evidence and remediation guidance - Executive summary and DARKINT™ Risk Score report preparation - Credential exposure register compilation - Remediation roadmap prioritization	Draft Reports
6	Days 12–14	- Final report quality assurance and review - Executive presentation preparation - Debrief session with technical and leadership stakeholders - Remediation guidance, takedown advisory, and Q&A	Final Reports + Presentation
7	Day 30–60	- Client completes priority remediation actions (credential resets, domain takedowns, IAM updates) - Nucleus Systems conducts an optional follow-up scan to confirm exposure reduction - Written attestation issued confirming remediation validation	Validation Report + Attestation (Optional)

SERVICE 2**Annual Continuous Threat Intelligence Monitoring**

12-Month Continuous Program — Dashboard Access from Day 7

Phase	Days	Key Activities	Output / Deliverable
1	Day 0	- Engagement agreement signed - Target profile collected: all domains, IP ranges, executive names, brand keywords, and supplier domains - DarkOwl monitoring dashboard provisioned and configured for client targets - Client onboarding session dashboard access, alert configuration, notification thresholds	Signed SOW, Dashboard Access
2	Days 1–7	- Initial baseline exposure assessment executed across all target parameters - All monitoring modules activated: credentials, domains, ransomware, forums, VIPs, vulnerabilities - Alert thresholds configured and tested with the client security contact - Baseline DARKINT™ Risk Score established	Baseline Exposure Report
3	Ongoing 24/7	- Continuous automated monitoring across all configured target parameters - Real-time alerts delivered via email, API, or dashboard notification on qualifying exposure events - Daily new-domain and phishing infrastructure detection - Ransomware and data leak site real-time monitoring	Continuous Alert Notifications
4	Monthly	- Monthly executive exposure digest compiled and delivered summarising new findings relevant to VIPs - Monthly credential leak summary, new breaches affecting monitored domains - Updated DARKINT™ Risk Score trend report - Client security contact check-in and alert threshold review	Monthly Intelligence Digest
5	Quarterly	- Practitioner-led quarterly review session contextualizing findings, trend analysis, and risk trajectory - Monitoring scope review and parameter updates at no additional cost - Quarterly threat actor targeting summary for client industry and sector - Up to 4 hours of deep-dive investigation support per quarter	Quarterly Review Report
6	Month 12	- Annual comprehensive exposure report — year-in-review of all exposure events, trends, and risk trajectory - Year-on-year DARKINT™ Risk Score comparison and benchmarking - Annual remediation roadmap update reflecting current exposure landscape - Programme renewal review and scope optimization for year 2	Annual Intelligence Report

Note: The annual program includes 24/7 dashboard access starting on Day 7. Monitoring parameters can be updated at any time. Quarterly investigation support (Service 2) is included within the annual program fee.

Pricing

The following pricing applies to standard engagements. All prices are in USD and exclude applicable taxes (VAT). Pricing is valid for 90 days from the date of proposal. Custom scoping or bundled packages are available upon request.

Service 1: Once-Off Business Exposure Assessment

Assessment Scope	Includes	Price (USD)
Standard Assessment	Up to 3 domains, 1 CIDR block, 5 VIP profiles, 10 brand keywords	\$18,500
Extended Assessment	Up to 8 domains, 4 CIDR blocks, 15 VIP profiles, 25 keywords, 5 supplier domains	\$24,500+
Enterprise Assessment	9+ domains, unlimited CIDR blocks, 16+ VIPs, 26+ keywords, up to 20 supplier domains	\$32,000+
Custom / M&A Due Diligence	Tailored scope for acquisition targets, portfolio companies, or specific threat investigations	On Request

Service 2: Annual Continuous Threat Intelligence Monitoring

Monitoring Programme	Includes	Price (USD / year)
Standard Programme	Up to 3 domains, 1 CIDR block, 5 VIP profiles, 10 keywords, 24/7 dashboard, monthly digests, quarterly reviews	\$30,000
Extended Programme	Up to 8 domains, 4 CIDR blocks, 15 VIPs, 25 keywords, 5 supplier domains, full program features	\$42,000+
Enterprise Programme	9+ domains, unlimited scope, dedicated analyst support, weekly reporting, custom integrations	\$60,000+
Custom / Managed Service	Fully managed service with a dedicated Nucleus Systems analyst, continuous investigation, and response support	On Request

Notes: All pricing excludes VAT/taxes. Valid for 90 days. Pricing may vary based on the volume and complexity of monitored targets identified during the scoping call. Annual program pricing assumes a 12-month commitment.

Real security is tested, not assumed:

In today's threat landscape, your organization's dark web exposure is not hypothetical; it is measurable, actionable, and growing. Business Exposure Assessment & Threat Intelligence provides the clarity that decision-makers need to manage external cyber risk with confidence. Nucleus Systems delivers that clarity through a practitioner-led, DarkOwl-powered approach that turns dark web intelligence into actionable business value, helping you move from blind spots to assurance with threat intelligence that is practical, precise, and built to uncover what truly matters.
