

Ensuring Digital Trust!

Solutions provider with a pragmatic and leadership-driven approach in addressing cybersecurity and compliance concerns.

www.nucleus-systems.com

About Us

Nucleus Systems provides clear, risk-based assurance on the security, reliability, and resilience of digital platforms.

- Focused on material risk, regulatory exposure, and operational resilience
- Covers governance, architecture, code, and live operations
- Combines technical expertise with decision-ready, business-relevant insights

Our Approach to Cybersecurity and Trust Enablement

Pragmatic, business-aligned cybersecurity that builds internal capability.

- Business-aligned security
- Deep Technical Expertise
- Proven tools and expertise
- Internal ownership over time

How We Work

- ❖ Aligned to open standards and global best practices (ISO, NIST, PCI, etc.)
- ❖ Contribute to the cybersecurity body of knowledge and industry evolution
- ❖ Low-touch, high-impact model — empowering clients to build internal capability
- ❖ Act as trusted advisors, not just external implementers

What We Deliver

- ❖ Practical, evidence-based cybersecurity and compliance assurance
- ❖ Clear, prioritized guidance aligned to business and regulatory needs
- ❖ Agile engagements (2–6 weeks) for rapid insight and action
- ❖ Solutions designed to be sustainable and client-owned

What We've Done

- ❖ Supported organizations globally across banking, fintech, government, and critical infrastructure
- ❖ Enabled compliance with leading standards:
ISO 27001, NIST, PCI DSS, HIPAA, HITRUST, GDPR, CCPA, SOC 2, TxRAMP, HETVAT
- ❖ Delivered tailored assurance programs for complex and regulated environments

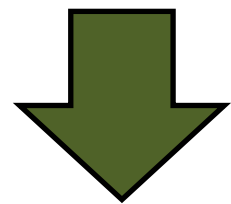

“Client team empowerment, education, and knowledge transfer are the core of our project delivery philosophy.”

Our Results-Driven Delivery Approach

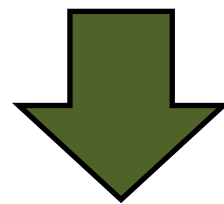

Below are examples of challenges we solve using our deep cyber expertise, complemented by our research-driven approach to solution architecting – No retrofitting, ready-made products and solutions to unique problems!!!

How can we embrace the Zero-Trust Model to improve our identity and access management across the network and applications?

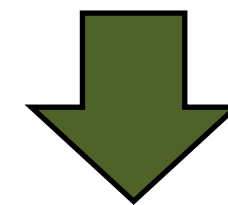

Refactored the existing network and cloud access architecture to embed Zero Trust Principles and enforce these using enabling technologies such as Zero Trust Network Architecture (ZTNA)

My company has acquired UK-based company with operations in China so how I approach privacy compliance

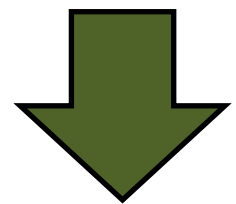

Drove a company-wide privacy initiative as a joint project between Legal, Compliance, and Cybersecurity team starting with a PIA and followed by DPIA and remediation of gaps (3-6 Months Effort)

A large enterprise was struggling to detect and block phishing emails due to its reliance on user education to avert phishing attempts

Recommended the deployment of an AI-based phishing detection and software as a plug-in within Outlook and managed to block over 90% all phishing attempts that could potentially lead to ransomware attacks

A private equity investment firm managing over 50 portfolio companies wanted a quick way to establish the external attack posture

Recommended the deployment of an External Attack Surface Monitoring Solution on all Porcos, and only perform a deep penetration testing exercise on companies with a lower EASM risk score

Cybersecurity and Compliance Offerings

We provide leadership-driven, business and technical advisory – acting as your organisational change agents.

Cyber Maturity Assessment and Roadmap Development

- Maturity Framework
- Perform Cyber Maturity Assessment in M&A
- Cybersecurity and Compliance Roadmap Development
- Standards(ISO27000, NIST, SOC 2, PCI DSS) and Compliance Assessment and Remediation Advisory

Tailored assessments for the board, executives and investors to provide them with a clear risk and improvement roadmap.

Fractional Chief Information Security Officer (CISO) Advisory

- Cybersecurity Program Assurance, Assessment, and Road mapping
- Planning, Architecture & Management of special programs:
 - ❖ Business Resiliency
 - ❖ Incident Response
 - ❖ Data Privacy
 - ❖ Post-quantum cryptography (PQC)

Market skills shortage and cost of hiring a dedicated CISO against an increasing number of cyber-attacks and compliance mandates.

Digital Platform Security and Artificial Intelligence (AI) Safety

- Product Security and Compliance Implementation Advisory, embedding AI into DevSecOps Practices
- Software Security Services (Threat Modelling, Secure Design, Custom & Open-source Code Risk Assessment, and Secure Releases)

Comprehensive testing and remediation advisory on digital platforms, ensuring robust defences against emerging threats.

Ensuring trustworthy digital public infrastructures (DPIs)

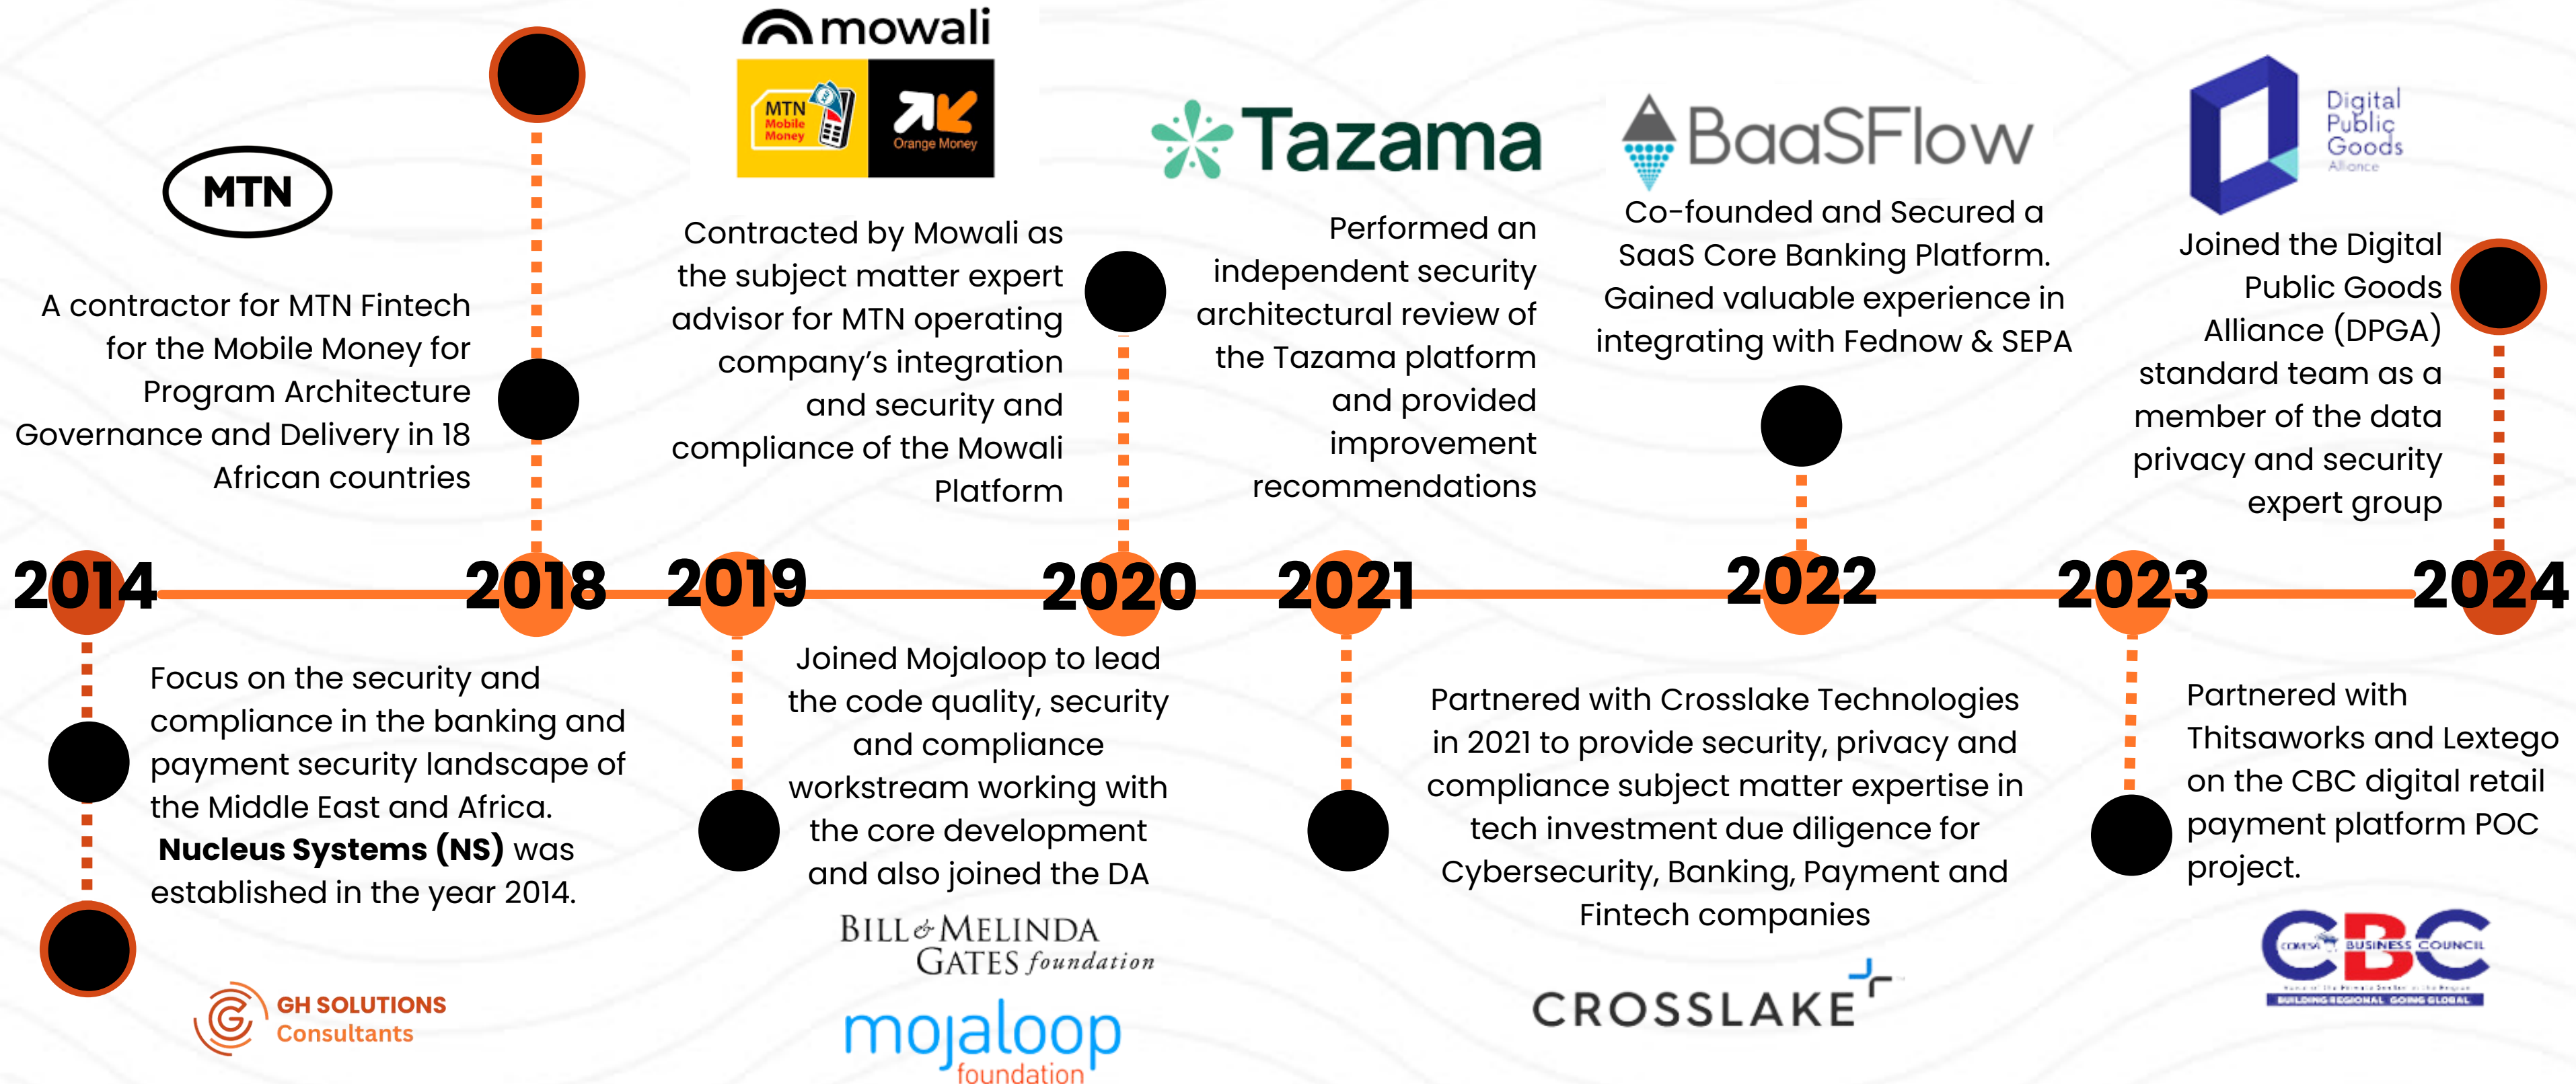

- DPI Trust Framework Establishment
- Secure Design and Deployment of Core DPI Pillars (Identity, Payment, and Data Exchange)
 - ❖ Assessment and Evaluation of DPG and DPI Trust Architecture and Exposures

Specialized trust assurance services aligned with the country's adoption of Digital Public Goods, in building Digital Public Infrastructures

Key Cyber Market Drivers & organisational needs for expert advisory

Our History & Key Milestones

Clients

In the past decade, NS has serviced over 200 clients globally directly or through strategic partnerships, giving a value on the field experience to leverage in future engagements.

Digital Public Goods	Financial Services Providers	Healthcare Providers	Education Service Providers	Other Industry Sector Clients
